

Data Privacy Requirements

Synthetic educational document created for project demonstration.

Purpose

This document defines the minimum data privacy requirements for any vendor that processes personal data on behalf of the company.

Required Contractual Language

Vendor contracts must explicitly define: the categories of personal data processed, the purpose of processing, data retention periods, data subject rights handling procedures, and breach notification timelines (no later than 72 hours after discovery).

Sub-processors

Any use of sub-processors to handle personal data must be disclosed and pre-approved in writing by the Client.

Cross-Border Transfers

If personal data is transferred across borders, the contract must reference an approved transfer mechanism such as Standard Contractual Clauses.

Non-Compliant Language

Generic statements such as 'Vendor will handle personal data appropriately' do not satisfy this policy and must be flagged as incomplete.
